

REVOLUTIONIZING MANAGED SERVICES

mWise Email Defense

mWise Email Defense provides powerful email threat protection at the network perimeter by identifying, quarantining, blocking and stripping suspect email messages before they can enter an organization's messaging infrastructure. This service allows the network to function more efficiently due to the reduction of SPAM that effects perimeter devices and mail servers. Business Continuity is addressed with the Fail Safe features that allows users to access email via a URL in the event of a Mail Server failure.

How it works

The mWise Email Defense service filters email before it enters the customer's network enabling users to retain 100 percent control of their data. With mWise Email Defense, customers never give up the management of their email servers, or redirect email policy or the management of email policy from their company to an outside organization. Their mail remains 100 percent under their control, yet their infrastructure and domain is completely protected because the mWise Email Defense service cloaks their messaging environment from the Internet and the email threats it can harbor.

Benefits

- ◆ Reduce legal liabilities
 - ◇ Provide secure message delivery via Transport Layer Security
 - ◇ Offer more than 20 layers of filtering protection
- ◆ Fail-safe remote access of email in the event your email server is offline
