REVOLUTIONIZING MANAGED SERVICES

## mWise Online Backup

Reliable, secure backup and restore capabilities are crucial to all businesses, but traditional methods of data backup have often proven cumbersome and costly. mWise Online Backup provides automatic online backup and restore of your critical data.

### On-demand Data Restoration

Lost files and computer downtime caused by user error and corrupted tape drives occur regularly and are the source of significant — but often hidden — business costs. In addition, restoring data from tape can take an inordinate amount of time and sometimes even fail, causing a direct impact to the business. mWise Online Backup ensures that your crucial data can be restored quickly, easily and on demand.

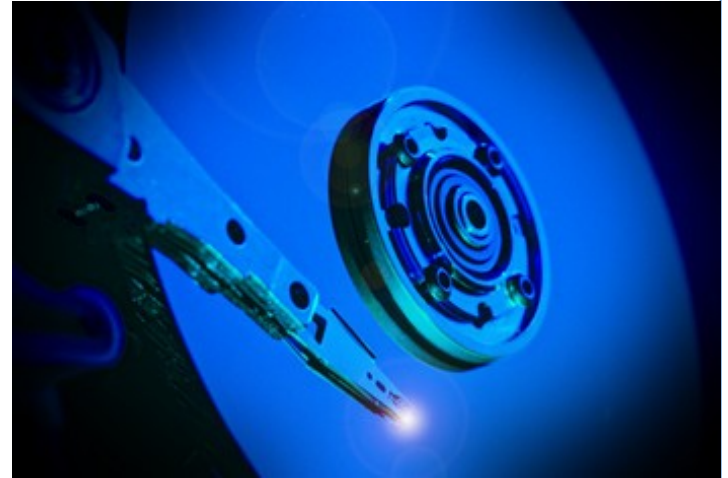

### How it Works

Intelinet Systems installs a small client software application on the local computer to manage all of the data protection and restoration. After the data you want to protect is identified, mWise Online Backup encrypts this data and then transfers a master copy to an Intelinet Systems data center.

### A Solution You Can Trust

Many companies trust the backup of their data to a fragmented and often ineffective policy of distributed tape devices, manual routines and off-site tape storage. mWise Online Backup provides a unique, automatic, safe approach to data storage by offering:

- ◆ **Secure Off-Site Storage** – A redundant copy of all of your critical information is stored in a secure data center. If your system crashes or your laptop is stolen, your important information is still safe and easily restored at any time day or night.
- ◆ **Unprecedented Data Integrity** – From the moment it's backed up until moments or years later when it's restored, your data is continually ensured that every single bit is 100% correct and intact.
- ◆ **No Hardware to Fail or Maintain** – No bad media, broken tape drives, misplaced tapes or faulty DVD drives. Your secure backup process is completely software driven and your backup is stored off-site without the hassle of putting tapes or DVDs in another location.
- ◆ **Automated Process** - No operator error or forgotten backups. You even receive automatic reminders via email about backup and disk usage status.

### Secure

- ◆ **256 bit Encryption** – All data is automatically encrypted based on your private passphrase prior to being transmitted to a secure data center. All communication with our data centers are also fully encrypted and verified to ensure no bits are tampered with.
- ◆ Without your password and passphrase, the stored information cannot be read or used by anyone else including the data-center staff.
- ◆ Once your encrypted information is offsite, only the encrypted changes to your data are transmitted to insure the fastest performance.

### PRICING OPTIONS

Option	Monthly Base Fee	Monthly Usage Fee
Base	\$10.00	\$1.24 per GB
Select	\$16.00	\$2.99 per GB up to 14GB
Select		\$1.89 per GB over 14GB

“One time” start-up fee and installation of \$150.00 or \$15.00 per device, whichever is greater

Select Option offers long term archiving, ask for the option comparison matrix for detailed information.
