

REVOLUTIONIZING MANAGED SERVICES

mWise Total Security

mWise Total Security integrates a single appliance into an organization's network to achieve robust security, reliability and efficiency for a unified approach that protects against network and application layer threats.

Unified Threat Management

mWise Total Security is a feature rich offering that combines multiple network and security functions at the perimeter, that include a firewall, intrusion prevention, protocol control, attacker blocker, VPN, anti-virus, anti-spyware, web content filtering, anti-spam, and anti-phishing, all of which are continually updated to protect from daily threats.

Exceptional Value and Performance

mWise Total Security delivers exceptional value and performance for organizations of all sizes in a fully managed solution that allows the features and functionality to change as your network demands. These business-class solutions provide security and threat management for an affordable monthly rate and are maintained to keep the security appliance up-to-date to protect users and critical data at the network perimeter.

Benefits

- ◆ Fully managed solution
- ◆ Control network activities that reduce productivity such as spam and inappropriate web surfing
- ◆ Enable anytime anywhere access for remote employees.
- ◆ Protect your computers and data from outside threats such as viruses, spyware, botnets and phishing.
- ◆ Continuous automated updates
- ◆ Feature virtualization eliminates large latencies associated with moving data through multiple applications.
- ◆ Works seamlessly with existing firewalls, routers and network appliances.
- ◆ Hot spare in less than 24 hour turn-a-round, full configuration backed up and maintained off-site.
- ◆ Policy Management (Pro Only)
Set user, group, and time based policies for web and remote access. Examples include providing more liberal web access to specific employee groups, such as research associates, or to everyone during lunch and breaks.
- ◆ Full Active Directory Integration (Pro Only)
Enables policy management and reporting by Active Directory user name. This simplifies monitoring and policy set-up.
- ◆ Clientless VPN (Pro Only)
